## Tell me

### Description

Knowing what is happening in the world is important as our world is becoming more and more connected Tell me allow you to get the news from a lot of sources and allow you to search about specific topics

### Intended User

Anyone who has an android phone and want to read the news

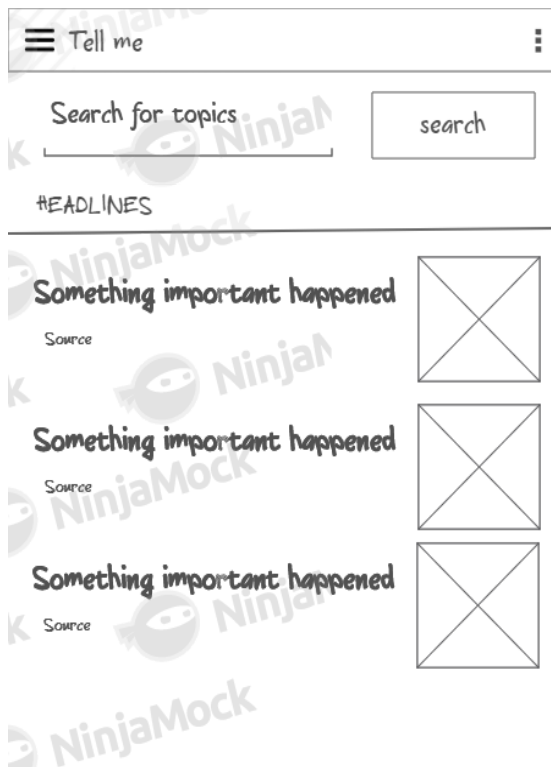

## Features

- Display recent news
- Allow user to search for specific topics
- Allow user to choose specific category
- Display news from multiple sources
- Allow user to save news to view it while offline
- Widget to present saved news headlines

## User Interface Mocks

These can be created by hand (take a photo of your drawings and insert them in this flow), or using a program like Google Drawings, [www.ninjamock.com](http://www.ninjamock.com), Paper by 53, Photoshop or Balsamiq.

### Screen 1 (Main Activity)

Contain news from all or selected source or from the search

## Screen 2

Navigation drawer to easily navigate through the app

## Screen 3 (Sources Activity)

Contain news sources from a selected category

## Screen 4 (Details Activity)

### Something important happened

Writer name

Source

occaecat cupidatat non proident, sunt in culpa

Open in browser

Contain the details of the news

## Screen 5 (app widget)

Tell me
Single-Line List
Single-Line List
Single-Line List
Single-Line List
Single-Line List

Contains list of headlines for the cached news and opens them in the app

Note that the app UI might vary a little bit from the mocks

## Key Considerations

**How will your app handle data persistence?**

Tell me will have a Content Provider

**Describe any edge or corner cases in the UX.**

- When there is no saved news the app should show a text to inform the user when he/she opens the saved news activity
- When there is no internet the app show the cached news
- Handling the Error responses from the api
- Handling if there is no news from a search done by the user

**Describe any libraries you'll be using and share your reasoning for including them.**

- Picasso or Glide to handle the loading and caching of images.
- Schematic for the Content Provider

**Describe how you will implement Google Play Services or other external services.**

- Firebase crash reporting.
- Google AdMob.

## Next Steps: Required Tasks

### Task 1: Project Setup

- Configure libraries
- Building the Utils classes and methods (eg,Json parsing , Network utils, model classes,etc)
- Adding required permissions
- Adding required dependencies

## Task 2: Implement UI for Each Activity and Fragment

- Build UI for Main Activity (News Feed)
- Build UI for Sources Activity
- Build UI for Details Activity
- Build UI for Cashed News Activity(i might not implement it and use the MainActivity instead and if implemented it will look similar to MainActivity)

## Task 3: Implement the app logic

- Getting the data from the internet(implementing the Loader)
- Binding the data to the UI (Using DataBinding)

## Task 4: Polishing the UI

- Refining the app UI/UX
- Adding Navigation Drawer
- Adding more settings for presenting the News

## Task 5: Adding the database

- Adding the content provider
- Implementing the code to cashe news offline

## Task 6: Adding Google play services

- Adding Firebase crash reporting and test it
- Adding Google Admob

## Task 7: Adding the app widget

- Implementing the app widget
- Connect it to the database

## Task 8: Testing

- Test the app
